

DISCLAIMER: This is not an EPPO paper. However, this document may be useful to assist applicants and evaluators with the application of EPPO Standard PP1/278 *Principles of zonal data production and evaluation*. Please note that the information presented in this document is a synthesis of data from the sources indicated. The accuracy of these data cannot be assured and may change over time. Expert judgment should be applied in all cases.

The actual distribution of crops in Europe

Pierre HUCORNE, Centre Wallon de Recherches Agronomiques, 5030 Gembloux, BE

1 Introduction

The entry into force of the Regulation (EC) No 1107/2009 has brought several novelties in the preparation and the assessment of biological efficacy dossiers. On one hand, the applicants have to conceive and to prepare dossiers that will be used for granting authorizations at the level of a zone comprising several EU Member States. On the other hand, the regulatory authorities (Rapporteur Member State) have to evaluate the dossier taking into account the agronomic conditions of a large geographical zone and not only their own local conditions and peculiarities.

This new approach implies a redefinition of the conditions of authorization and to bring an answer to the following questions:

- What is the optimal location of the trials in order to cover the conditions of several countries?
- What is the meaning of major/minor crop or use at zonal level?
- What are the different agricultural techniques for a crop within a zone (e.g. winter/spring varieties, outdoor/indoor, fresh market/industrial processing, human/animal consumption, etc.?)

The determination of the production areas of the crops in each European country, EPPO agroclimatic zone and EU administrative zone is a first step in answering these questions.

2 Procedure

Data on production areas have been retrieved from the Eurostat database. The mean of the years 2006-2010 have been calculated for each crop/country. A detailed explanation of the database and crop entries can be found in the Crop production - Manual for current statistics (2001).

Countries

The following countries have been taken into account in this study: the 27 Member States of the European Union, the Balkan countries (Croatia, Bosnia and Herzegovina, Former Yugoslav Republic (FYR) of Macedonia, Albania, Serbia, Montenegro and Kosovo), Switzerland and Norway. The following countries have been removed from the data query since their agricultural sector is minor, and/or, for a great extent, located outside Europe: Liechtenstein, Iceland, and Turkey.

The countries have been sorted according to their respective EPPO and EU zones, following the recommendations of the Guidance on comparable climates (PP 1/241 and the Annex I of the Regulation (EC) No 1107/2009).

The northern part of France is located in the Maritime EPPO region while its southern part is located in the Mediterranean EPPO region. The statistical data of the French Ministry of Agriculture (Agreste) have been used to determine the percentage of crop areas that are located in each EPPO region. The following regions of France are located in the Mediterranean EPPO region: Midi-Pyrénées, Languedoc-Roussillon, Rhône-Alpes, Provence-Alpes-Côte d'Azur and Corsica.

For a few crops, detailed data on the distribution in the regions were not available. In this case, the percentages for the maritime and mediterranean zones have been extrapolated, taking into account comparable crops (for example, distribution of all brassicas has been extrapolated from the distribution of the cauliflowers).

In the case of Switzerland, data on fruit and vegetable crops that were not available on the Eurostat database have been retrieved from the websites of the Swiss Federal Office of Statistics and of the *Agence d'information agricole romande*.

Unfortunately, statistical data for Serbia, Kosovo and Montenegro are not available in the Eurostat database. A survey of the agriculture of the Balkan states (Albania, Bosnia and Herzegovina, Croatia, Former Yugoslav Republic (FYR) of Macedonia, Kosovo, Montenegro, and Serbia) is available on the website of the European Commission. More detailed statistical data on agricultural production is also available on the website of the Ministry of Agriculture of Serbia and in publications of the Serbia Investment and Export Promotion Agency.

Reliable and detailed information on crop production has not been found for Kosovo and Montenegro. We have therefore only reported the information on utilized agricultural area, arable land, fruit crop and permanent grassland.

Groupings of countries by EPPO and EU zone

European countries	EPPO zone	EU zone
Estonia	North-East	Northern
Latvia	North-East	Northern
Lithuania	North-East	Northern
Poland	North-East	Central
Finland	North-East	Northern
Belgium	Maritime	Central
Czech Republic	Maritime	Central
Denmark	Maritime	Northern
Germany	Maritime	Central
Ireland	Maritime	Central
Northern France	Maritime	Southern
Luxemburg	Maritime	Central
Netherlands	Maritime	Central
Austria	Maritime	Central
Sweden	Maritime	Northern
United Kingdom	Maritime	Central

Malta	Mediterranean	Southern
Portugal	Mediterranean	Southern
Former Yugoslav Republic of Macedonia	Mediterranean	-
Albania	Mediterranean	-
Montenegro	Mediterranean	-
Bulgaria	South-East	Southern
Hungary	South-East	Central
Romania	South-East	Central
Slovakia	South-East	Central
Slovenia	South-East	Central
Croatia	South-East	-
Bosnia and Herzegovina	South-East	-
Serbia	South-East	-
Kosovo	South-East	-

An EPPO EU zonal map can be viewed at:

http://www.eppo.int/PPPRODUCTS/zonal_efficacy/zonal_map.pdf

Production areas are expressed in thousands of hectares.

Countries or zones accounting for more than 10% of the total production area of the crop in Europe (listing of countries in the table above) have been highlighted in the summary tables.

Percentage of the crop in the total arable land of the country

In the case of field crops, the production area has been expressed as the percentage of the total arable land of the country. Percentages above 10% have been highlighted in the summary tables.

This value can be considered as a good estimate of the crops that are the most likely succeeding crops or adjacent crops.

Vegetable crops represent a very low percentage of the arable land, even in the regions with very high vegetable production. They are generally located in specific regions due to edaphic conditions and to economic reasons (marketing and processing facilities, producers' organizations etc.).

Checking of the input data - Missing data

Crop areas are expressed in thousands of hectares. In the tables of this survey, figures marked as '0' represent:

- areas less than 100 ha for a particular crop, reported as a '0' in the Eurostat database;
- or missing data, data not reported in the Eurostat database. In the case of Serbia and Switzerland, data for some crops were not available on their official website.

3 Results

Allocation of the Utilised Agricultural Area (table 1 - in 1000 ha and in % of the UAA)

The main parts of the Utilised Agricultural Area (UAA) are the following:

- The arable land, excluding kitchen gardens and crops under glass. The main crop classes that are included in the arable land are the cereals, dried pulses, root and tuber crops, industrial crops, the vegetables, the fodder from arable land, fallow land and green manures, flowers and ornamental crops, crops grown for seeds (Temporary grasses that occupy the soil from one to five years are included in the fodder from arable land.);
- The permanent grassland which is the area always covered with grass (sown or natural) for at least 5 years;
- The fruit crops (including vine and olives);
- The crops under glass are surfaces for crop production under high, accessible cover;
- The areas cultivated in hardy nursery stocks;
- The area cultivated in plants to be braided such as osier willows, bamboo, rush, ratta, Canada poplar etc. (not reported in the summary table).

Cereals (tables 2, 3 and 4 - in 1000 ha and in % of the arable land)

Cereals are harvested as dry grain for consumption or for seed. When possible the winter and spring types have been presented separately.

Common wheat and spelt (*Triticum aestivum*, *T. spelta* and *T. monococcum*) are included in the same database entry; durum wheat (*Triticum durum*), barley (*Hordeum vulgare*), rye (*Secale cereale*), triticale (*Triticum* × *Secale*), oat (*Avena sativa*), maslin (a crop mix of *Triticum aestivum* and *Secale cereale*), maize grain (*Zea mays*), sorgho (*Sorghum bicolor* × *Sorghum sudanense*), rice (*Oryza sativa*).

Mixed grain other than maslin are summer cereals grown as mixes and harvested as dry grain, including seed.

Other cereals that are grown pure and harvested as dry grain have been merged: buckwheat (*Fagopyrum esculentum*), millet (*Panicum miliaceum*), canary seed (*Phalaris canariensis*), corn-cob-mix (*Zea mays*, harvested as humid grain) etc.

Maize can also be harvested as entire plants for animal feeding (green maize) (table 11)

Pulses (tables 5 and 6 - in 1000 ha and in % of the arable land)

These Fabaceae species are harvested as dry grain. These entries of the database also include crops for seeds:

- field peas (*Pisum sativum*) (partim) for animal feed;
- other peas such as chick peas (*Cicer arietinum*), *Pisum sativum* (partim), *Pisum arvense* etc.;
- kidney beans (*Phaseolus vulgaris* and *P. coccineus*);
- broad and field beans (*Faba vulgaris* or *Vicia faba* (partim));
- lentils (*Lens culinaris* and *Lens orientalis*);
- vetches (*Vicia sativa*, *Vicia pannonica* or *Vicia varia*);
- lupins (*Lupinus sp.*);
- other dried pulses, such as chickling vetch (*Lathyrus cicera*);
- soya bean (*Glycine max*) (in Eurostat database, under the industrial plants).

Tuber and root crops (table 7 - in 1000 ha and in % of the arable land)

Potato (*Solanum tuberosum*), sugar beet and fodder beet (*Beta vulgaris*), other root crops (topinambour, sweet potatoes, fodder parsnips, yams, cassava, etc.).

Industrial crops (tables 8, 9 and 10 - in 1000 ha and in % of the arable land)

Winter rape, spring rape (*Brassica napus*) and turnip rape (*Brassica rapa var. sylvestris*), sunflower (*Helianthus annuus*), oil flax (*Linum usitatissimum*), cotton seed (*Gossypium*) are used for oil production.

Other oil seeds (poppy, mustard, sunflower, cotton, earth almond, sesame, groundnut, etc.) are merged together.

Flax straw (*Linum usitatissimum*), cotton textile deseeded (*Gossypium*) and hemp (*Cannabis sativa*) are used for textile fiber production.

Chicory (for inulin) and chicory (for roasting) are both cultivars of *Cichorium intybus*. (Witloof chicory is presented in table 19).

Forage crops (tables 10 and 11 - in 1000 ha and in % of the arable land).

Fodder maize (*Zea mays*) in all its forms other than the grain alone.

Annual green fodder comprises:

- Cereals and the triticale used as fodder;
- Annual raygrasses (*Lolium multiflorum* and hybrid);
- Annual sorghum (*Sorghum bicolor*);
- The other graminaceous plants which are annual such as meadowgrass (*Poa annua*)
- The plants belonging to other families, such as the cruciferous non elsewhere counted (rape, etc) the California bluebell (*Phacelia tanacetifolia*) or buckwheat (*Fagopyrum esculentum*);
- the remainders of annual crops not elsewhere counted like those left after the harvest of the grains.

Several Fabaceae species are grown for green forage:

Clovers and mixtures, annual or perennial: crimson (*Trifolium incarnatum*), red (*T. pratense*), white (*T. repens*), Egyptian (*T. alexandrinum*), of Persia (*T. resupinatum*) etc.

Lucerne types of lucerne cultivated alone, of major economic importance, the principal of which is *Medicago sativa*, with *M. falcata*.

Other legumes for fodder inter alia sainfoin (*Onobrychis viciifolia*), the sweet clover (*Lotus corniculatus*), vetches (*Vicia sativa*, *villosa*, *panonica* etc.), the chickling vetch (*Lathyrus sativus*), trefoil (*Medicago lupulina*), the melilot (*Melilotus alba*), the sweet lupins (*Lupinus albus*, *angustifolius*, *luteus*), the serradella (*Ornithopus sativus*), the fenugreek (*Trigonella foenum-graecum*), the sulla (*Hedysarium coronarium*) etc.

Fodder kale (*Brassica oleracea* convar. *acephala*, var. *medullosa* et var. *viridis*) harvested green for animal feed, turnips (*Brassica napus* var. *napobrassica*) for stockfeeding.

Temporary grasses and grazings are harvested by mowing or by grazing. They occupy the soil from one to five years and are made up of pure or mixed with graminaceous plants of legumes, but these are majority. The species generally met are:

- Perennial ryegrasses (*Lolium perenne* x *boucheanum*);
- Brome-grasses (*Bromus catarticus*, *B. sitchensis*);
- The cocksfoot (*Dactylis glomerata*);
- Fescues: meadow's (*Festuca pratensis*), tall (*F. arundinacea*);
- Other graminaceous plants such as: perennial sorghum (*Sorghum sudanense*), timothy (*Phleum pratense*), tall oat grass (*Arrhenaterum elatius*), meadow foxtail (*Alopecurus pratensis*).

Pome fruits (table 12 - in 1000 ha)

Apples (including cider apples) (*Malus sylvestris*), pears (including perry pears) (*Pyrus communis*) and quinces (*Cydonia oblonga*).

Other top fruits (table 12 - in 1000 ha)

Avocados (*Persea americana*), figs (*Ficus carica*), kiwi (*Actinidia chinensis*).

Stone fruits (table 13 - in 1000 ha)

Peaches and nectarines which are two types of *Prunus persica*, apricots (*Prunus armeniaca*), cherries, including sour cherries (*Prunus avium* and *Prunus cerasus*), plums (*Prunus*

domestica), including mirabelle, plums greengages and damsons.

Nuts (table 14 - in 1000 ha)

Walnuts (*Juglans regia*), hazelnuts (*Corylus avellana*), almonds (*Prunus dulcis*), chestnuts (*Castanea sativa*).

Small fruits (table 15 - in 1000 ha)

Black currants (*Ribes nigrum*), red currants (*Ribes rubrum*), gooseberries (*Ribes uva-crispa*), raspberries (*Rubus idaeus*), strawberries (*Fragaria sp.*).

Citrus fruits (table 16 - in 1000 ha)

Cultivated citrus fruits exhibit a very complex taxonomy. The main types are the sweet oranges (*Citrus sinensis*), mandarins (*C. nobilis*), satsumas (*C. unshiu*), the tangerines, clementines, tangor and ortanique (*C. tangerina*, *C. clementina*), the lemons (*C. limon*, *C. aurantifolia*), the grapefruit and pomelo (*C. maxima*, *C. paradisi*).

Grapes, Olives (table 17 - in 1000 ha)

Grapes (*Vitis vinifera*) have been subdivided into three categories according to their production: grape for juice and wine, table grape, and raisin (dried grape).

Olives (*Olea europaea*) have been subdivided in 2 categories according to their production: table olive and olive for oil.

Other fruits

Some fruit species are not reported individually in the Eurostat database. They have not been included in this survey of the crops. They can however be significant in some countries, e.g.:

- Fruit crops such as bananas (*Musa sp.*), pineapples (*Ananas comosus*, *A. sativus*), medlars (*Mespilus germanica*), dates (*Phoenix dactylifera*), persimmons (*Diospyros kaki*), pomegranate (*Punica granatum*);
- Stone fruits such as sloes (*Prunus spinosa*), loquats (*Eriobotrya japonica*);
- Nuts such as pine-seeds (*Pinus sp.*), pistachio nuts (*Pistacia vera*) etc.;
- Small fruits such as blackberries (*Rubus sp.*), mulberries (*Morus*), bilberries (*Vaccinium myrtillus* and *Vaccinium corymbosum*), prickly pears (*Opuntia ficus-india*), elderberries (*Sambucus nigra*), sea-buckthorn (*Hippophaë rhamnoides*) etc.;
- Citrus fruit, such as bitter orange (*Citrus aurantium*), bergamote (*C. bergamia*), fingered citron (*C. medica*), *C. myrtifolia*, *C. limettioides*, *C. limetta*, *C. limonia*, *C. madurensis*, *C. hystrix*, *C. lemon x sinensis*).

Brassicacs (table 18 - in 1000 ha)

Cauliflower and broccoli (*Brassica oleracea convar. Botrytis var. Botrytis*), Brussels sprouts (*Brassica oleracea var. Gemmifera*), white cabbage (*Brassica oleracea convar. capitata. var. Alba*), kohlrabi (*Brassica oleracea convar. acephala var. gongylodes*).

Other brassicas such as red cabbage (*B. o. convar. capitata. Var. capitata f. rubra*), curly cale (*B. o. convar. acephala. var. sabellica*), Savoy cabbage (*B. o. convar. capitata var. sabauda*),

Chinese cabbage (*Brassica chinensis*).

Leafy or stalked vegetables (table 19 - in 1000 ha)

Lettuces (*Lactuca sativa* var. *capitata*), endives (*Cichorium endivia*), chicory for witloof production (*Cichorium intybus* var. *foliosum*), spinach (*Spinacia oleracea*), celery (*Apium graveolens* var. *dulce*) leeks (*Allium porrum*), asparagus (*Asparagus officinalis*), globe artichokes (*Cynara scolymus*).

Other leafy or stalked vegetables such as basil (*Ocimum basilicum*), mangel (foliage beet) (*Beta vulgaris* ssp. *vulgaris* var. *vulgaris*), cardoon (*Cynara scolymus*), chervil (*Anthriscus cerefolium* ssp. *cerefolium*), garden cress (*Lepidium sativum*), watercress (*Nasturtium officinale*), chives (*Allium fistulosum*), tarragon (*Artemisia dracuncululus*), fennel (*Foeniculum vulgare*), corn-salad (*Valerianella locusta*), sorrel (*Rumex acetosa* var. *hortensis*), parsley (*Petroselinum crispum* ssp. *crispum*), dandelion (*Taraxacum officinale*), purslane (*Portulaca oleracea* ssp. *sativa*), rhubarb (*Rheum rhabarbarum*), rucola (*Eruca sativa*), thyme (*Thymus vulgaris*) etc.

Pulse vegetables (table 20 - in 1000 ha)

The peas (*Pisum sativum*), beans (*Phaseolus vulgaris*, *Phaseolus coccineus*, *Vigna* ssp.) and the other pulses not elsewhere indicated such as butter bean, green broad bean (*Vicia faba*) are harvested fresh for direct consumption, canning or deep freezing.

Fruit vegetables (tables 21 and 22 - in 1000 ha)

Tomatoes (*Lycopersicon esculentum*), egg-plants or aubergine (*Solanum melongena*), red pepper, capsicum (*Capsicum annuum*).

Cucumbers and gherkins are 2 forms of the *Cucumis sativus*, melons (*Cucumis melo*), watermelons (*Citrullus lanatus*).

Gourds and pumpkins (*Curcubita moscata et maxime*; *Curcubita pepo* convar. *giromontiina* - inedible peel), courgettes (*Curcubita pepo* convar. *giromontiina* - edible peel).

Root and tuber vegetables (tables 22 and 23 - in 1000 ha)

Garlic (*Allium sativum*), onions (*Allium cepa*, *Allium ampeloprasum*, *Allium fistulosum*), shallots (*Allium ascalonicum*).

Carrots (*Daucus carota*), turnips (*Brassica rapa* var. *rapa*), beetroot (*Beta vulgaris* var. *conditiva*), salsify and scorzonera (*Scorzonera hispanica*, *Tragopodium porrifolium*), radishes (*Raphanus sativus*).

Other root bulbs and tuber vegetables such as swedes (*Brassica napus* var. *napobrassica*), parsnips (*Pastinaca sativa*), horse-radish (*Armorica rusticana*), Jerusalem artichoke (*Helianthus tuberosus*), black radish (*Raphanus sativus* var. *niger*), galangal (*Alpinia officinarum*), Chinese or Japanese artichoke (*Stachys sieboldii*), Hamburg Parsley (*Petroselinum crispum* var. *neapolitanum*).

Ornamentals (table 24 - in 1000 ha and in % of the arable land)

Flowers and ornamental plants, including seeds and seedlings of flowers and other ornamental plants. Excluding: kitchen gardens, excluding cultivations under glass (high, accessible covers).

Flowers and ornamental plants under glass.

Determination of the most likely succeeding/adjacent crops (table 25)

The 30 most frequent field crops that can be considered as the most likely succeeding crops or adjacent crops have been ranked for the 4 EPPO zones.

Percentages above 10% have been highlighted in the summary tables.

Table 1	Utilized agricultural area (UAA)	Arable land		Permanent grassland		Fruit crops		Crops under glass		Hardy nursery stocks (including vine stocks)	
		X 1000 ha	%	X 1000 ha	%	X 1000 ha	%	X 1000 ha	%	X 1000 ha	%

Broad b., fields beans	32.0	Soya bean	63.4	Water melons	50.7	Peas	38.5

4 Discussion and Conclusions

The quality of a survey depends on the quality of the input data. In this case the focus has been put on the relative weighting between crops and countries or zones. The economic aspects and the different modes of production have not been taken into account. The data have been averaged for the period 2006-2010. The evolution through time has not been considered and it has been assumed that the situation was stable during the period.

The information on Balkan countries and particularly on Serbia is rather limited. Therefore, the importance of the agriculture in those countries has been underestimated. Some minor inaccuracies could have also occurred in the determination of the distribution of crops in the Maritime and Mediterranean zones in France.

The basic information on the main production areas indicates the relative importance of a crop in a specific zone and therefore assists with the allocation of efficacy trials. It reveals that some crops are specific to one or a few countries. It can be expected that a lot of experience on the agronomic practices is available in those countries. It should also be mentioned that most vegetable and fruit crops are mainly grown in restricted regions.

This survey could also help with issues of major/ minor crop definition. It demonstrates that crops which could be considered as minor at local level represent in fact several thousands of hectares in Europe. The less represented (individual statistical data available) top fruits, small fruits, vegetables, cereals and other field crops are respectively the quinces (6300 ha), the gooseberries (3700 ha), the shallot (2500 ha), the spring rye (6700 ha) and the turnip for stock feeding (3900 ha).

A crop which is minor in a specific country could be defined as a crop representing a restricted percentage of the total production area of the crop in Europe. A crop could also be defined as minor, by comparison with a major crop. In this case, the principle of extrapolation could be used to present the dossier.

A ranking of the most likely succeeding and adjacent crops at EPPO zone level has been proposed.

This information could also be used in the framework of pesticides risk indicators which, basically, combine a risk evaluation at field level (for example the risk to groundwater or to non-target organisms, etc.) with the number of hectares that are subject to that risk.

As outlined in EPPO Standard PP1/278 *Principles of zonal data production and evaluation*, the information on the distribution of crops should be combined with other aspects such as the pest distribution and pressure (which are also considered in the EPPO PP2 series of good plant protection practice standards: <http://archives.eppo.int/EPPOStandards/gpp.htm>), the methods of production and economic importance of the crops and the intensity of pesticide use.
